

# Minibeast city

spring

Many minibeasts (invertebrates) have spent the winter as an egg or larvae ready to hatch out or transform into an adult minibeast. On a warm spring day, many will be actively scurrying around looking for food whilst trying to avoid being eaten.

Find a good place where a variety of minibeasts might like to live. Remember not all live in dark damp places, some prefer bright sunny glades!

Build a minibeast city using things you find on the woodland floor, somewhere they can hide from predators, somewhere they can bask in the sun to warm up and get moving, somewhere they can find food. Why not give them a minibeast playground too.

Next time you visit you may find some minibeasts have moved in!
